

ovo Locus Containing *svb* and *ovo* genes

Major 5-kb ovarian RNA Structure

Minor 5-kb ovarian RNA Structure

7.1-kb Mid-Embryonic mRNA of *svb*⁻

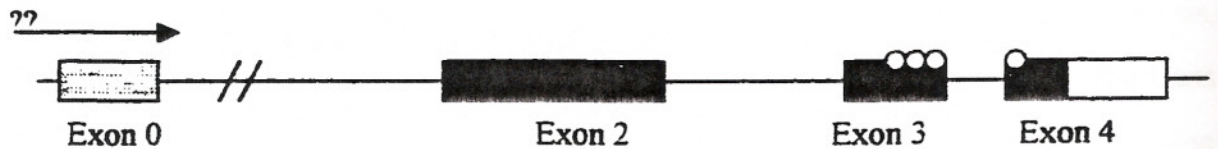

Figure 1.3. Molecular Structure of the *ovo* Locus. Exons are represented by boxes and that of introns by lines. Black boxes show ORFs common for *svb* and *ovo*. Wavy-filled boxes represent ORFs specific to *ovo*. Grey box is ORF specific to *svb*. Open boxes correspond to 5' and 3' of untranslated mRNA regions. Circles represent zinc-finger proteins shared by *svb* and *ovo* for different stages of development.
